Key-Value Database

Complete the following tasks using Redis DB. Your own details like regno, name also have to be included where ever possible.

1. Consider a **Food Ordering System** use case (question no 3) where food name is the key of the Redis string. Solve the following queries using a list as the main concept.
 - a. Store food details.
 - b. Retrieve food details.
 - c. Check the length of a food item's details.
 - d. Append a new attribute to an existing food item
 - e. Store multiple food items at once

FoodID	Name	Category	Price
F101	Margherita Pizza	Italian	12.99
F102	Chicken Biryani	Indian	15.99
F103	Sushi Platter	Japanese	24.99

2. Consider a Gaming: Player Profiles & Scores use case (Question no 3) where player_data is the key of the Redis string. Solve the following queries using a string as the main concept.

1. Store a Player's Profile Information
2. Retrieve a Player's Profile.
3. Store Multiple Player Profiles at Once.
4. Set a Temporary Boost for a Player.
5. Append a New Achievement to a Player's Profile.

PlayerID	Username	Level	HighScore	Achievements
P001	GamerX	15	9800	First Win, Level Master
P002	Shadow	20	12500	First Win, Champion
P003	Blaze99	10	7600	Quick Learner, High Jumper

Q3. Write commands using REDIS datastore (15)

1. Write a command for creating a key "MOVIES"
2. Using List data structure for the same key MOVIES, add the following 5 films in the front end of the list. i.e., Avatar, The father, King Kong, the parasite, superman.
3. Insert a document called "No time No die" before King Kong.
4. Once inserted, list out all the values of the "MOVIES".
5. Pop the document KINGKONG from MOVIES and insert the same in another list called "TOPMOVIESOFTHEWORLD"

Q4. Store the following student registration details in a key value data structure which stores the details in registration order and answer the given question

CSE_STUDENTS

ADITYA

PRANEETH

YASHASWINI

PANANGAPALLI

RAHUL

VENNELA

KAVYA

KAVYA

RAGHUNATH

VARTIKA

- a) Insert all the given values into appropriate data model
- b) Remove the last registered student.
- c) Insert "PAVAN" after RAHUL.
- d) Remove last occurrence of the student "KAVYA"
- e) Display 4th students in the registration list
