Key-Value Database

Complete the following tasks using Redis DB

1. Insert the following key-value pairs into HASHSET and perform the required operations

Products

<your name> <your regno without alphabets>

Smartphone 15000

LED TV 25000

Shoes 700

Headphones 500

Toys 1500

1. Display all the details of products
 2. Display only the product names
 3. Display the price of LED TV
 4. Remove the product Headphones
 5. Verify the product Toys is available in products hashset or not
 6. Increment all the products' price by 150.50
2. Insert the following values into Sorted Set redis db using java or python and answer the questions

Movies

<your name> <your regno without alphabets>

Ironman 2000

Batman 3000

Wonder women 2500

Captain marvel 3000

Batman 3500

1. Add all the movies into Sorted Set
2. Display all the movies from the Sorted Set
3. Increment Batman by 1500
4. Display all the movies in reverse order as per score
5. Display highest score movie name
6. Show the rank of Wonder women

DB Connect – Sample code:

```
import redis.clients.jedis.Jedis;
public class RedisJava {
    public static void main(String[] args) {
        //Connecting to Redis server on localhost
        Jedis jedis = new Jedis("localhost", 6379);
        System.out.println("Connection to server sucessfully");
        //check whether server is running or not
        System.out.println("Server is running: "+jedis.ping());
    }
}
```

Note:

Use object-oriented features to implement this project
